

DroneSuite®

Integrated Management for Drone Operators

DroneSuite® is a SaaS platform aimed at facilitating the management, operation and administration of commercial UAV operations.

It allows you to monitor and control operations, automate processing tasks and efficiently generate results with high added value.

Functionalities

- > Multi user
- > Fleet management
- > Operations manager
- > Editable checklists
- > Integration with UTM
- > Data processing
- > Multimedia
- > Live View
- > DroneVideoRecorder
- > Automatic flight book
- > WEB tool
- > Notifications & Alerts

COMMAND & CONTROL

Plan and execute the flight plan with the GCS. Integration and synchronization with the WEB platform.

FLEET MANAGEMENT

Control and monitor the assets and personnel of the company. Real time monitoring via Live View.

OPERATIONS MANAGEMENT

Plans and design your flight in the office for the actions / operations to be carried out in the field. Review all the telemetry and data captured in the post-flight.

DATA PROCESSING

It processes and exploits the information captured, analyzing and studying the necessary aspects through the different tools integrated into the platform (3D generator and viewer, ...) using a digital laboratory.

RESULTS

It generates striking results with graphic and documentary presentation of the analyzed and processed results in the form of reports and statistics.

ADMINISTRATION

It performs different generic tasks for the operator (user registration, ...)
